

# OPUS-Database: Supplemental Data for Better Datum Conversion Models

D.R. Roman and N.D. Weston

F.I.G. Working Week

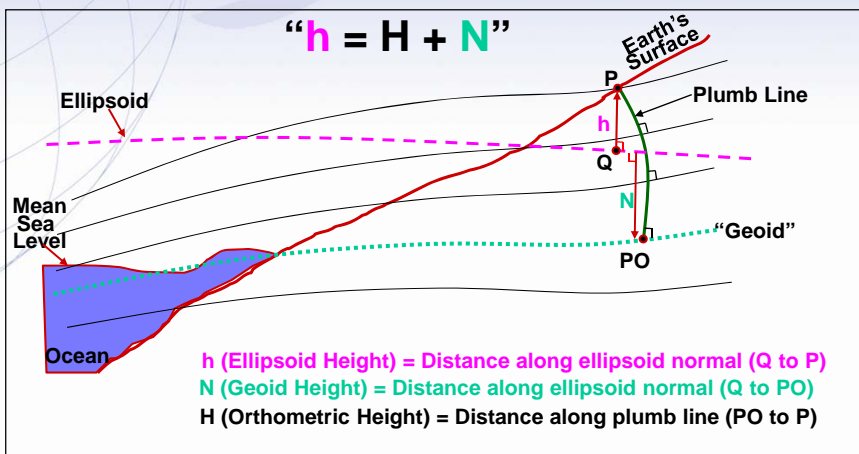

Session TS04A: National Geodesy I

Marrakech, Morocco 18-22 May 2011

## OUTLINE

- Intro to hybrid geoid modeling
- NGSIDB versus OPUS-DB
- Comparison to Common Points
- Implications of New Control Points
- Examining Some of the Suspect data
- Conclusions

# Relationship Between Heights

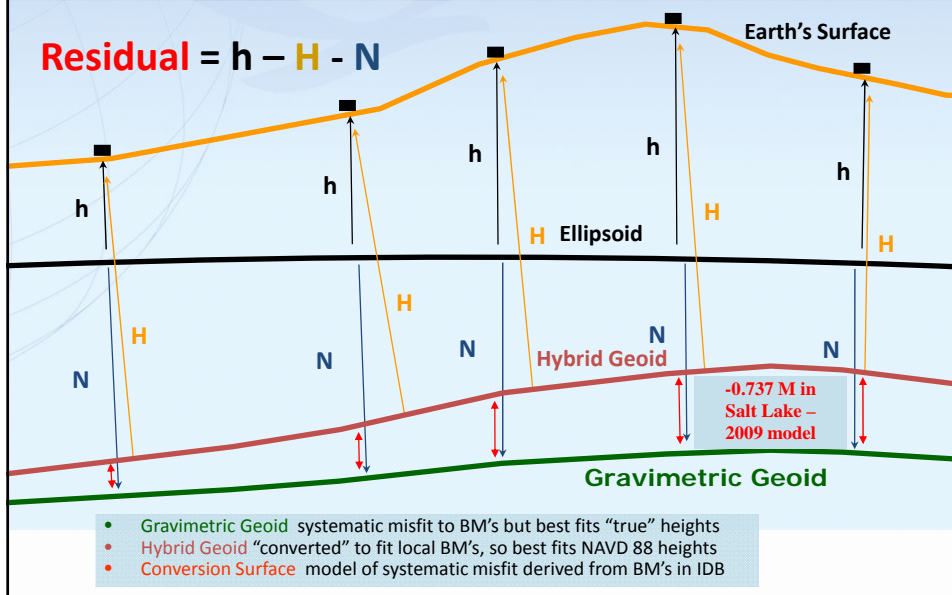

Session: TS04A  
Friday, 20 May 2011

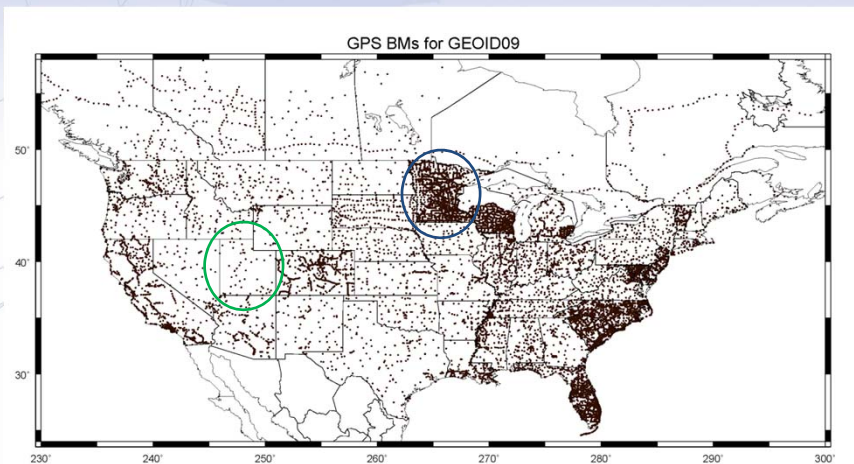

F.I.G. Working Week  
Marrakech, Morocco 18-22 May 2011

3

Hybrid Geoid Height Models (e.g., GEOID09) are determined from Gravimetric Geoid Height Models (e.g., USGG2009) and Conversion Surfaces based on GPS on BM data

# Distribution of GPSBM2009

18,398 points in CONUS plus 579 in Canada

Session: TS04A  
Friday, 20 May 2011

F.I.G. Working Week  
Marrakech, Morocco 18-22 May 2011

5

# NGSIDB Versus OPUS-DB

## NGSIDB

- Passive control adjustment of stored data
- Episodically refined (NA2011 starting very soon)
- Traditional surveying
- A lot of (important!) numbers and text

## OPUS-DB

- Actively determined from CORS
- Constantly refined using current CORS
- Dynamic Surveying
- A lot of numbers/text as well as some useful images

### The NGS Data Sheet

See file [data.txt](#) for more information about the datasheet.

SURVEY DATASHEET (Version 1.0) [http://www.ngs.noaa.gov/CORS-Proxy/OPUS\\_dtd/getDataSheet.jsp?T...](http://www.ngs.noaa.gov/CORS-Proxy/OPUS_dtd/getDataSheet.jsp?T...)

### SURVEY DATASHEET (Version 1.0)

Session: TS04A  
Friday, 20 May 2011

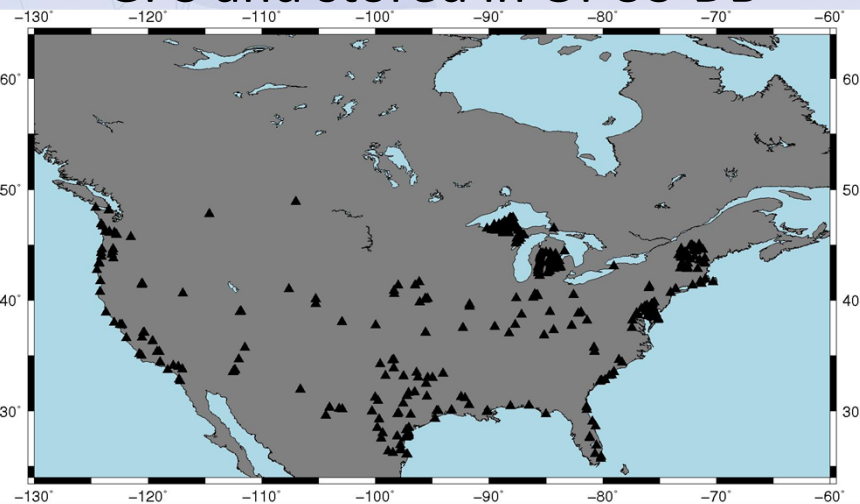

F.I.G. Working Week  
Marrakech, Morocco 18-22 May 2011

6

## Developing a Better Distribution

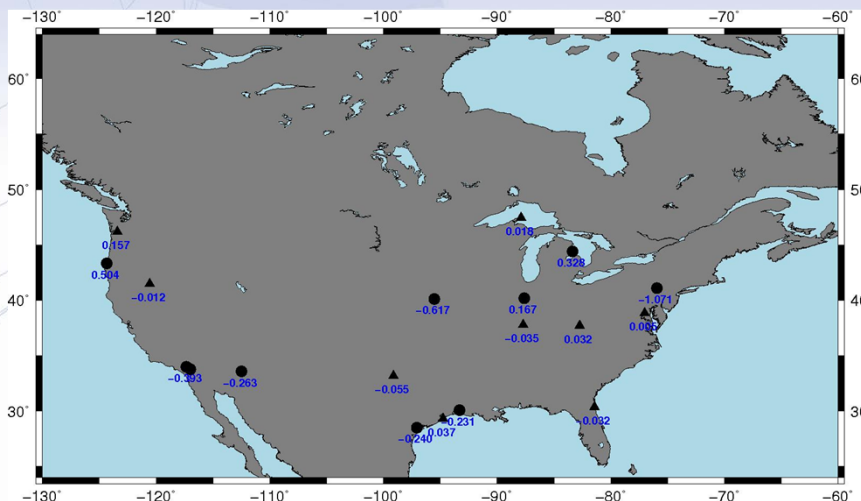

- Selectively occupy bench marks with no previous GPS
- Targeted campaign in coordination with states
- Fill voids to reduce the interpolated signal
- Modeling for hybrid geoid using multi-matrix least squares collocation
- Spacing of the control data directly impacts the interpolated signal

## Levelled Bench Marks Occupied by GPS and stored in OPUS-DB

Groups of the 422 points pulled from OPUS-DB	No. Pts	A		B		C	
		NGSIDB Res.		OPUS-DB Res.		OPUS-DB-NGSIDB	
		Ave	SD	Ave.	SD	Ave	SD
(1.a) All Common Points that were used in GEOID09	80	-0.009	0.065	0.004	0.036	0.013	0.060
(1.b) Common Points less the 9 rejects	71	-0.004	0.015	0.003	0.031	0.006	0.028
(2) Common Points but <i>not</i> used to make GEOID09	57	0.001	0.043	0.007	0.037	0.006	0.044
(3.a) Points Not Previously Observed with GPS	285	n/a	n/a	-0.011	0.112	n/a	n/a
(3.b) Points Not Previously Observed less the 11 rejects	274	n/a	n/a	-0.008	0.047	n/a	n/a

## Rejected Points

## Rejected Points Common to NGSIDB

PID	Reject Code	NAVD88 ortho. ht.	GEOID09 height	NGSIDB ellips. ht.	NGSIDB Residual	OPUSDB Ellips. ht.	OPUSDB Residual
AW5707	S	0.709	-26.638	-25.916	0.013	-25.892	0.037
HA0997	h	118.247	-30.526	87.726	0.005	87.686	-0.035
DO0454	H	383.465	-28.982	353.943	-0.540	354.428	-0.055

LF0630	not in IDB	336.765	-30.541	n/a	n/a	305.607	-0.617
LY1475*	not in IDB	372.450	-32.186	n/a	n/a	339.193	-1.071
TT0450	not in IDB	11.425	8.766	n/a	n/a	21.028	0.837

LY1475\* has actually been pulled from OPUS-DB by the submitter

Session: TS04A  
Friday, 20 May 2011

F.I.G. Working Week  
Marrakech, Morocco 18-22 May 2011

12

## Possible Error Sources

Session: TS04A  
Friday, 20 May 2011

F.I.G. Working Week  
Marrakech, Morocco 18-22 May 2011

13

- Human-Induced Subsidence
  - Groundwater Pumping
  - Oil Extraction
  - Mining Operations
- Earth Dynamics
  - Litrpic Faulting/Slumping
  - Coastal Erosion/Uplift

## CONCLUSIONS

- Only a fraction of the leveling has been GPS'd
- Existing coverage in NGSIDB is very irregular
- OPUS-DB offers better results
- OPUS targeted to regions of poor coverage
- NGSIDB values to be integrated into OPUS-DB
- Problems remain in crustal movement regions
- Non-simultaneity of GPS & leveling
  - changes over time pass erroneously into geoid

Session: TS04A  
Friday, 20 May 2011
