Changing role of the Danish Cadastre

- The Danish Cadastre is the basis for all land registration in Denmark
- Role has changed from basis of land registration to a multifunctional purpose
- Digitization and focus on digital administration in the public sector has changed the focus of the cadastral parcel towards a role as a fundamental geographical reference layer

Danish Ministry of the Environment
National Survey and Cadastre

Crucial demands for use as administrative ref. layer

- Data must be **accurate**
- Data must be **complete**
- Data must be **acesible**
- Data must be **current**
- Data must be **updatable**

Danish Ministry of the Environment
National Survey and Cadastre

Case: PlanDK - Administration of regulative plans in Denmark

- Regulative plans are digitized and presented using the cadastral map as a referencelayer
- Purpose is to deliver one national solution for the municipalities when registering and presenting regulative planning info

Danish Ministry of the Environment
National Survey and Cadastre

Challenges exist – Update procedures

- The plans must always be

Individual
regulative plans in
PlanDK

Danish Ministry of the Environment
National Survey and Cadastre

Challenges exist – Accuracy

Danish Ministry of the Environment
National Survey and Cadastre

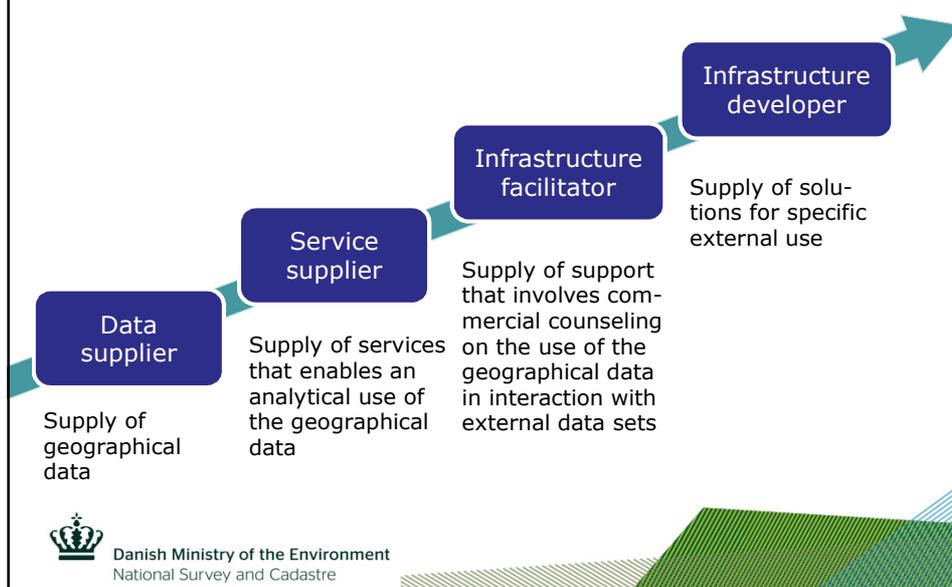

The big question...

What business does The Danish National Survey and Cadastre want to be in the future??

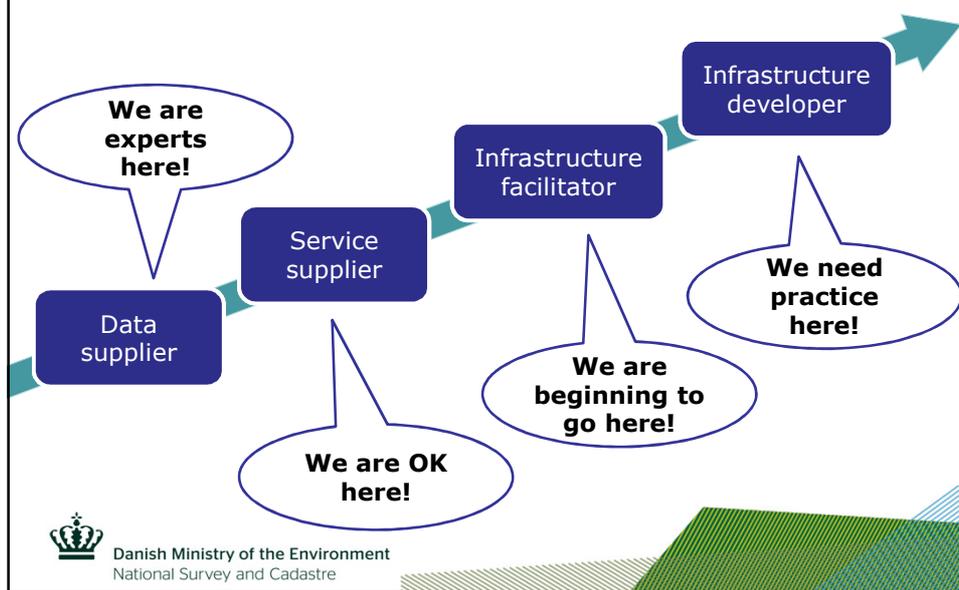

Danish Ministry of the Environment
National Survey and Cadastre

Levels of services

Danish Ministry of the Environment
National Survey and Cadastre

Where are we now in Denmark?

Summary

- **Smartly used, cadastral data has the potential to act as an important element in any country's public geographical infrastructure**
- **Especially the processes of administration/registration is of value when using the cadastral map as a cross-governmental referencelayer**
- **Both technological and more business policy related matters must be adressed**
- **It's not an easy task!**

**Thank you for your
attention**
