

Experimental use of WebClass

Yoshiro Nakahori (Japan)

Key words: Education; e-learning, WebClass

SUMMARY

E-learning is expected to be a very powerful and effective tool of education in the field of surveying according to the FIG Publication No.46 “Enhancing Surveying Education through e-Learning”.

The author has had a chance to use in a classroom course of the Saitama University, e-learning tool which is called WebClass developed by Data Pacific Japan LTD..

WebClass is specially designed for universities and technical colleges. WebClass assists teachers to create syllabus, to provide course materials, to assess scores, to take attendance, and so on.

WebClass saves busy teacher’s time and also assists students to learn subjects.　

In this paper, the author presents the outline of WebClass and my experience of using it.
