Point Cloud Classification & Photogrammetry Data

- Generating point clouds from imagery is easy and available

EMBRACING OUR SMART WORLD WHERE THE CONTINENTS CONNECT:

ENHANCING THE GEOSPATIAL MATURITY OF SOCIETIES

Point Cloud Classification & Photogrammetry Data

- DTM generation
- Vectorization/shape extraction
- Roads, trees, cars detection&counts

EMBRACING OUR SMART WORLD WHERE THE CONTINENTS CONNECT:

ENHANCING THE GEOSPATIAL MATURITY OF SOCIETIES

The problem

Manual labeling is impractical and unfeasible for large datasets → need for automated machine learning approaches

ORGANISED BY

MAIN SUPPORTERS

PLATINUM SPONSORS

Our goals

Propose and evaluate an automatic classification approach that

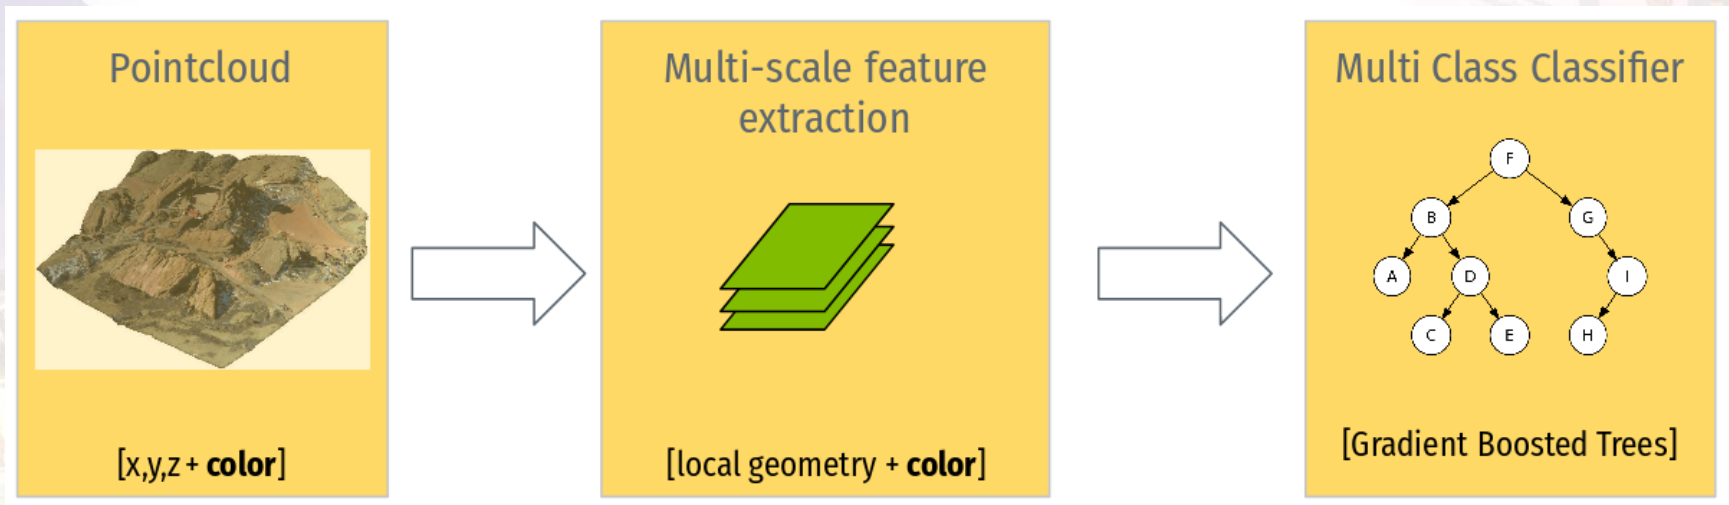

- is computationally efficient to be run **interactively**
- runs on **large** photogrammetry point clouds
- Exploits **color information** from photogrammetry data

Overview of the proposed method

ORGANISED BY

PLATINUM SPONSORS

Multi-scale feature extraction

Geometry information

- Voxelize point cloud at different scales (from 20 cm to 50 m) to capture spatial information

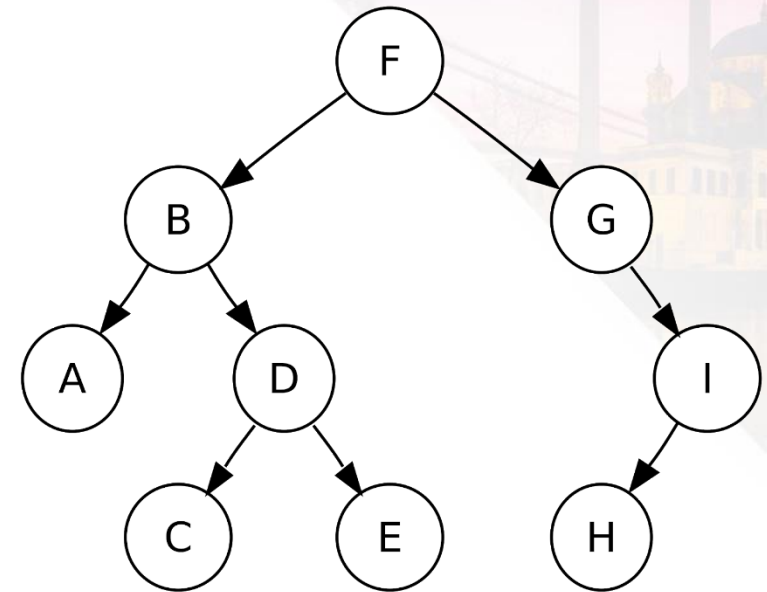

Color information

- Color of the point of interest
- Average color of neighboring points within radius r

Multi class classifier

We used Gradient Boosted Trees (GBT)

- fast to train and predict
- early stopping scheme gained 3x speed-up

ENHANCING THE GEOSPATIAL MATURITY OF SOCIETIES

Our datasets

Ankeny (9M points)

Buildings (3.4M points)

Cadastre (5.8M points)

generated with Pix4D Mapper Pro and fully labeled. Publicly available now at

ENHANCING THE GEOSPATIAL MATURITY OF SOCIETIES

Experimental setup

Use 1 dataset for testing, all remaining for training

Different set of features:

- Geometry only
- Geometry and point color
- Geometry, point color and neighborhood color

Classification based Digital Terrain Model (DTM)

Minimize an energy functional based on input DSM using a binary terrain mask

Generate the mask using classification results:

- Rasterize classified point cloud into an image
- Filter the image to remove artefacts

Examples

(a) Orthomosaic

(b) Rasterization

(c) Rasterization + Filtering

XXVI FIG Congress 2018

Conclusion

Evaluated a new classification approach for photogrammetric point clouds

- Computationally efficient (10M points in about 1 minute)
- Runs on large point clouds
- Exploits color information
- Available in Pix4D Mapper Pro
- Improved DTM generation

Photogrammetry datasets now available at pix4d.com/research
